Continuation of 11. does NOT place the application in condition for allowance because: In response to applicant's argument that the Yeakley and Cureton references are nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See In re Oetiker, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, both references pertain to a wabble mechanism that are constructed to address balancing issues. As such, the references are indeed in the field of applicant's endeavor and is reasonably pertinent to the particular problem with which the applicant was concerned.

In response to applicant's argument that the Yeakley and Cureton references pertain to larger scaled internal combustion engines as opposed to handheld impact tools, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

In response to applicant's argument that Yeakley does not include "at least one balance mass provided on a wobbling ring", the limitations on which the Applicant relies (i.e. a specific connection between at least one balance mass "provided on" a wobble ring) are not stated in the claims. It is the claims that define the claimed invention, and it is the claims, not specifications that are anticipated or unpatentable. Limitations from the specification are not relied upon since it is the language itself of the claims which must particularly point out and distinctly claim the structure which the applicant regards as his invention. Further, the structure disclosed in Yeakley reads upon the aforementioned claim limitation given its broadest reasonable interpretation since it discloses sufficient structure (in the specification and Figures of the Yeakly reference) as well as addresses the particular problem with which the applicant was concerned (balancing issues).
